### Hot Metal Mix

This recent Hot Metal project shows there is no need to be timid in today's market. In this venue, Hot Metal laminate was used as the surface finish to the front of the reception desk. Hot Metal was specifically used for its bright, dimensional look which could give the reception desk a flashy feature simply by blending a selection of Hot Metal's contrasting, vivid colours with its contemporary random pattern. This mix has created a playful yet powerful feature desk which has a strong presence in a prime position in the venue. This is an example of how Hot Metal can be used when colour, fun and functionality are in mind.
