

Hot Metal Water Features.

Hot Metal can be designed to make a stylish and stunning water feature. In today's high-stress world, people want attractive, tranquil spaces within the built environment. A place where they can relax and recharge and which is away from hectic areas commonly found in commercial, hospitality and residential environments.

Designing Hot Metal into water features can create a calm, tranquil ambience in reception areas, lobby's, restaurants, hospitality venues and at home, inside or out. Hot Metal's metallic translucent colours compliment garden greenery and its vivid colours will make a striking artistic feature.
