

Hot Metal® laminate at the movies

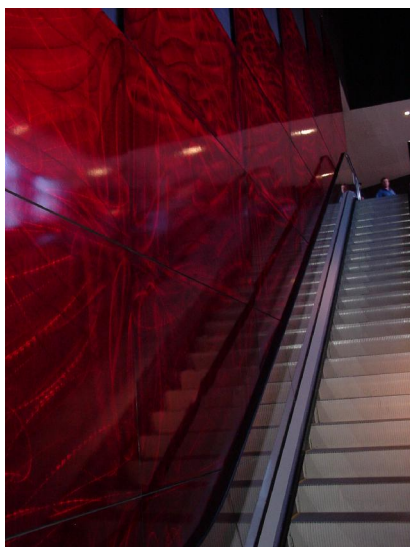

Going to the cinema can be exciting entertainment. The internal design of the cinema complex and its careful use of architectural products will only enhance the venue's entertaining appeal.

Hot Metal® laminate is an exciting product offering great impact through visual effects. This is why it has been used in a newly completed cinema complex at Rouse Hill, NSW.

Hot Metal® laminate has been applied to 290 square meters of the cinema's interior surfaces. The applications are visually stunning and numerous. They include, a large feature wall in the main entrance area of the venue, feature doors and walls encasing the foyers to 6 large cinemas, signage in the gold lounge and signage to 3 gold lounge boutique cinemas.

The Hot Metal® colour Fire Fly Red in the random pattern has been used to evoke an exciting almost red carpet experience to the movie goer as they pass through any of the foyers to the 6 cinemas. Hot Metal® Gold in the random pattern has been used to display a luxury element in the gold lounge and in the 3 gold boutique cinemas. Sophisticated signage has been designed successfully to produce a look that is quite paramount.

In this project, lighting has been strategically positioned onto Hot Metal® to enhance its powerful dimensional effects. Such outstanding visual effects could almost be seen to kick-start a ready mode for viewing the visual effects present in many films today.

Hot Metal®the coolest trend in laminate.

Hot Metal® is Australian designed and manufactured, using handcrafted techniques. Hot Metal® is Patent protected.
