Hot Metal laminate feature doors

Hot Metal® feature doors make an outstanding entrance at Allied Medical Health in Melbourne. Impact and interest to the suites has been achieved by laminating Hot Metal® to the doors.

Hot Metal® is very distinct and unequalled in its look. It is a metal laminate created by using patent technology, combining metal with translucent colour's and exciting patterns to produce a finish with striking dimensional effects.

In this project, other practical Hot Metal ®applications included door surrounds and wall skirting's. The overall effect produces a professional appearance with bright clean lines.

Hot Metal® was selected for this project because it is a laminate that makes a statement and stands out. It is favoured because it is durable, easy to work and requires minimal cleaning. Hot Metal® is a handmade product engaging environment friendly processes and is Australian made and owned.
